Making water storage easy since 2002

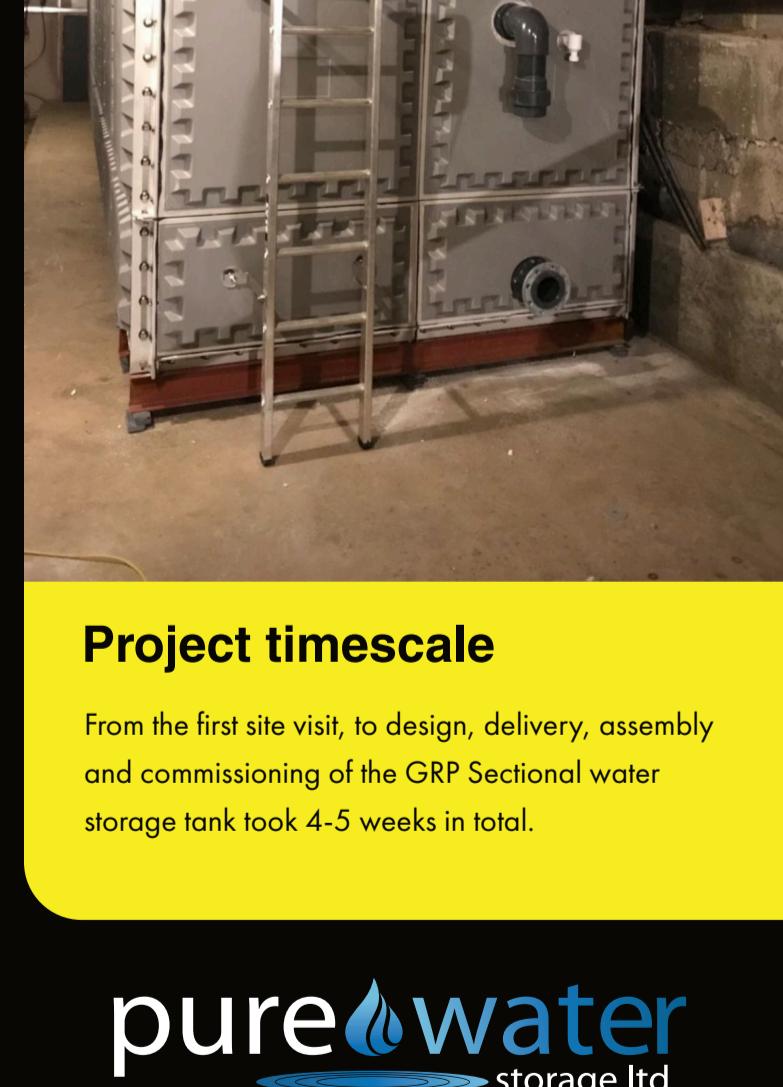

Project date: December 2019

## Project overview

When Watford FC were promoted to the Premier League, in order to meet the increased demand for stored water, Purewater Storage Ltd were asked to design and install water storage tanks to fit under one of the main stands in the football ground.

## Challenges and obstacles

Because of the complex nature of the area under the stand, Purewater Storage Ltd decided that 2 No TIF Sectional water storage tanks were required to make maximum use of the space available, whilst also being able to solve the issue of limited access, by having panels capable of fitting through the doorway. The works could only be carried out during international breaks because of the stadium being in constant use from a hectic Premier league season.

## Project timescale

From the first site visit, to design, delivery, assembly and commissioning of the GRP Sectional water storage tank took 4-5 weeks in total.
