

Use immediate video evidence to prove liability, reduce third-party costs, protect against fraud and increase road safety

Integrated 3G camera and software solutions

Origin Voice & Data Limited

# Device Overview

## IT1000 - 3G Vehicle Camera

**Lens** - we record in HD at the optimum lens angle for clarity of license plates and evidence gathering.

**GPS** - unlike other cameras, we measure speed and location at 10 times a second for unrivaled accuracy. If we say we hit a third party at 3.2mph - believe it!

**G-Force Chip** - when configuring devices or learning how different drivers, vehicles and even locations operate, we measure behavior at up to 1,600 times a second. The result - relevant, event based telematic and video with one goal - risk reduction.

**Back-up Battery** - when your device senses a harsh event/accident - it instantly switches to internal power to ensure we always get the footage we need.

Origin Voice & Data Limited

# How it works

1. G-Force trigger is activated
2. Camera automatically streams footage via secure 3G network
3. Client or insurer has visibility of footage in seconds

Accident  
Harsh Event

- Immediate Claims Management
- Proactive Driver Training
- Fleet Management
- Health and Safety
- Brand Protection

This all happens within seconds  
of the accident or harsh event!
