

# Active Connect Sustainability Update 2022

**Last year** we published our sustainability report that detailed our organisations existing carbon footprint and our sustainability aims and objectives for the future.

## Progress to date:

In the last 6-months we have focused on our assessor's recommendations and actioned areas that will make an immediate difference and will also engage our staff and clients alike.

To date we have implemented the following to actively reduce our carbon emissions:

- Installation of Photovoltaic (PV) Panels at our Offices
- Addition of an Electric Vehicle to our current fleet
- Provision of recycled workwear to all staff
- Roll out of E-Learning training to all staff
- Subscription to UK Tree Planting Scheme to off-set emissions from the fleet's EV Charging
- Supply chain's emission targets and goals requested and recorded

**Our aim is simple. We are committed to addressing climate change. By 2028 we will be carbon neutral.**  
**#active8zero**
