

Neco Eco wireless receiver manual

The main technical parameters

1. Voltage/Frequency: 230V/50HZ 110V/60HZ (as requirement)
2. Maximum Drive Power:1200W
3. Wireless Transmit-receive distance: more than 100 meters (open area)
4. Wireless Frequency:433.92MHZ
5. Wireless Data Storage Function: 20 transmitters can be stored
6. Transmit frequency of wireless data is 1kbit/s, each frame length 64bit, each frame include encrypted address code, synchronisation code and control code, every time the data one emitter transmit is different.
(rolling code teachnology)
