

CAS UKMON Report to CAS Committee Meeting 19/05/2016

This report covers activities between the 21st April 2016 and 19th May 2016 for the CAS Meteor Observation Camera 2 located as part of the Society Observatory at NT Dyffryn Gardens.

The main item to report is that data recorded from the 1st April 2016 to the 30th April has been post processed and uploaded on to the UKMON server.

Some examples:

Another make of USB Video Capture Device (Dazzle DVC100) has been installed and is working okay. The original device removed is currently with Alan Stephens to see if it can be used in association with a camera on the telescope.

The PC has crashed only once on the 5th April 2016 in the period of this report, this is an improvement on earlier months this year. Many of the crashes experienced are at hours where the Observatory would be unattended, usually the early hours of the morning.
